Description	Our most popular and versatile substrate. It's perfect for applications requiring durable prints and smooth routed cuts. Plus, it's 100% recyclable!	Our most rigid, high density and 100% recyclable polystyrene foam board. It's perfect for applications requiring the most durable and warp resistant prints.	Priced to beat competitors, this budget friendly choice is one of the most cost effective and lightest foam core substrates available on the market today.	Ideal for digital prints, this product is a perfect choice for cost saving, durable and beautiful 3D displays. It's our top pick for retail and tradeshow structures.	Our most rigid panel, it's PVC facer is moisture and warp resistant, lightweight and durable. An excellent alternative to other rigid materials like plywood.	Engineered specifically for mounting applications, it's the show-stopper of foam mounting boards with all the surface quality and rigidity of pricier foam boards.	An ideal choice for a wide variety of quick moving short-term applications including event displays, temporary exhibits, sale signs and photo mounting.	This attention grabber is a light weight, cost effective solid-metal alternative. It has all the appeal of metal with the advantages of foam. Great for letters and logos!	Our gallery-ready mount board features a high-tack acrylic adhesive pre-coating on one side and a black or white edge band finish for a high end look.	One of the smoothest rigid mounting boards on the market! Try our premium pressure sensitive adhesive over our smoothest styrene facer and rigid core.	Perfect for framed art and photographic applications! This product is very warp resistant with Peel N' Stick high-tack adhesive over a poly coated paper facer.	Our most cost effective pressure sensitive adhesive mounting board with a color neutral clay coated paper surface is perfect for quick change out signs.	Unmatched HIPS quality & consistency; as well as improved logistic services to our distribution centers nationwide. Perfect for window signs & banners.
